MODERN LUXURY SPOTLIGHT

INNOVATORS
in
AESTHETICS &
BEAUTY

At Modern Aesthetic Plastic Surgery, Drs. Skalicky and Feldman, along with their aestheticians and injectors, constantly strive to perfect existing techniques in cosmetic surgery based on both new technologies in the field and varying patient requests. Every patient is given a specific treatment plan that is individually tailored to their needs.

The surgeons, injectors and medical aestheticians at Modern Aesthetic are focused on the latest trends in cosmetic surgery, including minimally invasive techniques and procedures that rejuvenate appearance with less downtime. These techniques include a multitude of procedures that can be performed in an office setting under local anesthesia. Examples include eyelid surgeries, mini-facelifts, facial fat transfer and even nasal reductions, without the need for expensive hospital fees. In addition, the nurse injectors and aestheticians perform facial rejuvenation techniques that enhance appearance through facial contouring procedures with the newest injectable products and skin tightening using lasers and energy-based devices.

Every member of the Modern Aesthetic team understands the subtleties of facial anatomy and its differences from patient to patient. Perhaps the greatest strength of each team member at Modern Aesthetic is their ability to use their "aesthetic eye" when developing individualized treatment plans. This inherent skill allows each surgeon or provider to apply their knowledge of anatomy and procedure expertise in the most beneficial way to enhance appearance.

Currently, their most popular treatments in the practice include body contouring procedures, breast procedures, facial rejuvenation, facial injectables, fat transfer, rejuvenation lasers, rhinoplasty and eyelid procedures. One of the newest rejuvenation approaches in the practice include what is termed "multiple minis". This approach to rejuvenation involves packaging many isolated smaller aesthetic procedures in combination to give the greatest overall change for a patient in the most cost-effective manner. Rather than choosing one larger surgery, a patient may better benefit from smaller procedures in combination such as nasal rasping, upper eyelid skin removal and fat transfer for all at once to give a better overall change as opposed to one isolated procedure.

The aesthetic journey for each patient begins with a consultation at one of the practice's two beautiful locations. At the consultation, each patient will meet with one of the practice providers and be evaluated, educated, and informed of all treatment options. According to the Modern Aesthetic team, "Looking good is commonly a major factor in feeling good."
